

STIs

Virus: (no cure- can treat symptoms)

- × HIV/AIDS
- × HEPATITIS B (affects liver)
- × Herpes II virus will live in you forever and herpes can reappear at any time (oral herpes can turn to genital herpes through oral sex)
- × HPV- genital warts must be removed by freezing, burning or laser surgery (warts can reappear any time) a different strand of HPV is a leading cervical cancer

Bacteria: (can be cured with an antibiotic)

- × Gonorrhea
- × Chlamydia
 - No symptoms for many women
 - For men, foul odor, burning sensation during urination and greenish/yellowish/whitish discharge

If left untreated it can cause PID which causes women to be sterile/infertile (can't have babies)

- × Syphilis
 - Stage 1 chancres
 - Stage 2 rash
 - Stage 3 latent (no symptoms) can last 10-20 years
 - Stage 4 death, blindness, insanity

Pubic lice (crabs) - parasites. Cure is a special shampoo and you must wash EVERYTHING in boiling hot water!! Can get this even without having sex (sharing towels, clothes, beds, etc)

Condoms offer protection against some STIs but not all of them!!

Use eyes to prevent

1. Leave some light on
2. Look for symptoms like bumps, rashes, warts, sores
3. Don't have sex if you see anything!!
